PROFESSIONAL SUMMARY

Full Stack Developer with 5+ years of experience building event-driven, cloud-native applications on AWS and the JVM. At Delta Airlines, designing Kafka event pipelines, real-time baggage-tracking systems and an AI root-cause agent with Java (Quarkus), AppSync, Kinesis and Angular. Builds and ships AI products end to end, most recently Drippy, a live outfit-scoring app on Next.js, SwiftUI, Supabase and Claude vision.

SKILLS

Languages: Java, TypeScript, JavaScript, Swift, C#, SQL, Bash, PowerShell
AWS & Cloud: MSK (Kafka), Lambda, Kinesis, AppSync (GraphQL), API Gateway, CloudWatch, Route 53, multi-region failover
Back-End: Quarkus, Spring Boot, Microservices, REST APIs, Event-Driven Architecture, Node.js, ASP.NET
Front-End & Mobile: Angular (up to v19), React 19, Next.js, SwiftUI (iOS), HTML5, Tailwind CSS
Data: DynamoDB, PostgreSQL (Supabase, row-level security), SQL Server, MongoDB, MySQL
AI & Agents: Claude API (vision, structured output), MCP servers, LLM tool-calling, agentic workflows
DevOps & Tools: Docker, Kubernetes, CI/CD Pipelines, Git, Vercel, Octopus Deploy, SonarQube, Postman

PROFESSIONAL EXPERIENCE

DELTA AIRLINES, Bangalore, India

Full Stack Developer | Sep 2024 – Present

- Implemented an event-driven workflow on **AWS MSK (Kafka)** with **Java Quarkus**, consuming Bag, Flight and Passenger (Pax) events, applying business rules and persisting results for downstream operations processing.
- Built **Baggage Manager**, a real-time application that integrates **AWS AppSync** with **Kinesis** streaming to display all bags at a station alongside live flight-status updates.
- Engineered **multi-region failover** for AppSync and API Gateway between us-east-1 and us-west-2 (and back), keeping baggage services available during regional outages.
- Developed the Baggage Manager UI in **Angular 19** with AppSync GraphQL subscriptions for live data; monitored and tuned services with CloudWatch, Lambda and DynamoDB.

DEALERSOCKET (A SOLERA HOLDINGS COMPANY), Bangalore, India

Full Stack Developer | Aug 2022 – Sep 2024

- Engineered a **Spring Boot** integration for Toyota enabling dynamic UI and service interaction.
- Built the 'Store Closed Days' **Angular** grid with Java CRUD controllers, letting sales teams manage dealership closures without engineering support.
- Developed a desking component of the salesperson dashboard in **React + TypeScript** on a Spring Boot backend using concurrency techniques for responsive pricing calculations.
- Awarded **Star of the Month** twice (May and Sep 2023) for performance and innovation in project delivery.

WIPRO, Bangalore, India

Full Stack Developer | Jul 2021 – Aug 2022

- Enhanced a financial platform's features and resolved production defects using **Angular, TypeScript and Spring Boot**, building dynamic UI components for real-time data services and analytics.
- Worked with **MongoDB** as the platform database, writing stored procedures and functions to client specification.

PROJECTS

bag-triage-mcp – AI Root-Cause Agent for Baggage Operations | Delta Airlines

Java Quarkus | Model Context Protocol (MCP) | LLM tool-calling | CloudWatch Logs Insights | AWS

- Designed and built an **MCP server** that turns baggage troubleshooting into a conversation: an engineer supplies a bag tag, asks "what happened?", and agent tools run **CloudWatch Logs Insights** queries over the event timeline, reconstruct the bag's persistence history across services and surface exactly where a reroute or lookup went wrong.
- Extended the tooling to **Pax and Flight events**, cutting incident triage from manual multi-service log hunting to a single prompt; now the first stop for support, on-call and QA.

Drippy – AI Outfit Scoring App | Personal product, live | github.com/manasbolt945/drippy

Next.js 16 | React 19 | TypeScript | SwiftUI | Supabase (Postgres, Edge Functions) | Claude vision | Vercel

- Built and shipped a mobile web app and **SwiftUI** iOS client: snap an outfit and **Claude vision** returns an overall score, a score and reason for eight occasions, and tips, shareable as a 9:16 story card.
- Wrote the scoring backend as a **Supabase Edge Function** (TypeScript): anonymous auth, per-user daily limits, **JSON-schema structured output**, and Postgres **row-level security** on every scan.

EDUCATION

Vellore Institute of Technology (VIT), Vellore, India | B.Tech in Information Technology | Jul 2017 – May 2021
