PROFESSIONAL SUMMARY

Software engineer with 5+ years of experience building and running production systems in **Python** on AWS, working directly with the operations and business teams who use them. Owns customer-facing projects from kickoff to live: scoping the real problem, building the integrations, data pipelines and services, rolling them out inside strict airline and finance environments, and proving they worked with production metrics. Explains status and risk plainly to engineers and executives, and turns field lessons into reusable tooling so the next project ships faster.

SKILLS

Languages: Python, SQL, TypeScript, Go, Bash
Python Stack: FastAPI, Pydantic, SQLAlchemy, asyncio, confluent-kafka, boto3, pytest, Pandas
APIs & Integration: REST / GraphQL APIs, webhooks, Kafka streaming, ETL and data pipelines, legacy system integration, API Gateway, AppSync
Cloud & Data: AWS (MSK, Lambda, Kinesis, DynamoDB, CloudWatch, Route 53, IAM, VPC), Azure fundamentals, PostgreSQL, SQL Server, MongoDB, multi-region failover
Security & Compliance: Least-privilege IAM, private networking / VPC, access controls, security reviews, SonarQube quality gates, change management in regulated environments
Delivery: Docker, Kubernetes, CI/CD, Octopus Deploy, Git, production debugging, Angular / React front-ends
AI Tooling: AI coding agents in daily workflow (Claude Code), MCP servers, LLM tool-calling, workflow automation

PROFESSIONAL EXPERIENCE

DELTA AIRLINES, Bangalore, India

Full Stack Developer | Sep 2024 – Present

- Owns the **Kafka (AWS MSK)** event-processing services written in **Python (FastAPI, asyncio)** from design through production: consuming Bag, Flight and Passenger events, applying business rules, and persisting results that downstream operations systems depend on.
- Works directly with station and operations teams as the customer: turns vague asks into scoped deliverables, says so when a request will not help, and reports status and risk in plain language.
- Designed and delivered **multi-region failover** for AppSync and API Gateway between us-east-1 and us-west-2, keeping baggage services available through a regional outage and failing back safely.
- Handles the messy parts: security reviews, least-privilege IAM and private networking for new integrations, and legacy airline systems with no documentation.
- Debugs across the platform and partner stacks with **CloudWatch metrics, logs and alarms**; built **bag-triage-mcp**, a reusable Python tool that cut root-cause time from hours to minutes.
- Built **Baggage Manager**, a real-time station view over AppSync and Kinesis; mentors newer engineers.

DEALERSOCKET (A SOLERA HOLDINGS COMPANY), Bangalore, India

Full Stack Developer | Aug 2022 – Sep 2024

- Engineered a customer integration for **Toyota** dealerships: Python services and REST APIs shipped through CI/CD (Octopus Deploy, SonarQube gates) onto **Kubernetes**, inside the client's security and compliance rules.
- Owned the 'Store Closed Days' project end to end: scoped it with sales owners, built the Angular grid and Python CRUD services on SQL Server, and rolled it out so sales teams stopped needing an engineer.
- Developed a desking component of the salesperson dashboard in **React + TypeScript** while running two other customer projects in parallel.
- Awarded **Star of the Month** twice (May and Sep 2023) for delivery and innovation.

WIPRO, Bangalore, India

Full Stack Developer | Jul 2021 – Aug 2022

- Enhanced a financial platform under strict compliance controls: real-time data services, MongoDB procedures and production fixes on a regular release cadence.

PROJECTS

bag-triage-mcp – AI root-cause agent for baggage incidents | Delta Airlines

Python | FastMCP (Model Context Protocol) | boto3 | CloudWatch Logs Insights | AWS

- Designed and built an **MCP server** that turns incident triage into a conversation: give the agent a bag tag, ask what happened, and its tools run **Logs Insights** queries over the event timeline, reconstruct the bag's persistence history across services and surface where a reroute or lookup failed. Extended to passenger and flight events; now the first stop for support, on-call and QA during incidents.

EDUCATION

Vellore Institute of Technology (VIT), Vellore, India | B.Tech in Information Technology | Jul 2017 – May 2021
